REIDsteel

From our 5 acre site in Southern England, we ship to over 140 countries. We design, fabricate and erect unique and functional steel frame structures.

REIDsteel offer the complete building envelope.

Budget and Design • Our team of sales engineers take your project from start through to completion.

By coming to REIDsteel at the earliest stage we are able to make your project efficient whilst still considering the architectural and key functions of the structure.

All our structures are designed and drawn in house by experienced design engineers and draughtsmen who utilise industry leading computer software as well as REIDsteel's company developed programmes.

Steelwork • We have a patent for "Method and apparatus for constructing buildings using braced tied portals" and our technical knowledge and experience can create structures with the clean, slender lines that fully adhere to the National Structural Steelwork Specification.

Building Components • We can also include many ancillary items such as:

- Roofing and wall cladding
- Doors; personnel, panic, roller shutter, sectional overhead, hangar fabric.
- Cranes designed to fit
- Extraction vents and ventilation louvers
- Ridge vents
- PV Panels (Solar Panels)
- Roof safety systems
- Stairs
- Mezzanine Floors
- Gutters and Downpipes

Erection • On-site we can make use of our own plant and equipment or hire locally. We make decisions based on safety, speed, budget and of course, quality. We provide experienced erection supervisors for overseas projects to assist your team with on-site erection.

Your Steel Structure Now & Future •

- We strive towards creating a structure that meets your needs in the short term and the long term.
- By fabricating your steel structure on our premises it needs no on-site welding or modification, just bolted connections.
- All of our steel structures are designed for low maintenance.
- The complete envelope we offer means that we have maximum flexibility throughout the project and can cater to any changes or minor difficulties that may suddenly occur.
- We understand that steel's relative lightness in weight allows for adaptation in the future, and often work with existing clients modifying previous structures to meet new business demands.
